

HARMLESS

HARMLESS is a European Commission and European Space Agency (ESA) Project with the objective of researching and promoting the application of navigation satellite systems within:

- Emergency Management
- Humanitarian Aid
- Law Enforcement

HARMLESS comprises all involved actors: industry, authorities and operative entities.

HARMLESS needs your help to define the future of European satellite navigation.

Project Schedule:

- **Analysis Phase:** From June to December 2006
- **Trials:** From January to December 2007
- **Conclusions:** March 2008

HARMLESS combines the technologies of satellite navigation, communications and Earth observation.
Examples of HARMLESS applications:

- Management of deployed resources: people, teams, vehicles...
- Rescue and escape routes.
- Dispatch and efficient management of personnel and resources (police, ambulances, forest fire...)
- Help request (gender violence, Alzheimer's patients)
- Fast cartography of devastated areas
- Disaster prevention: terrain deformation measurement
- Identification of aiding delivery and collection points.
- Border control.
- Tracking of suspects and people in parole and probation.
- Accident reconstruction and crime scene investigation.
- Fight against economic and cyber crime: transaction time stamping and authentication.
- Theft objects recovery.
- Vehicles immobilisation.

Who can contribute to HARMLESS project?

- Representatives of public and private organisations involved in Emergency Management, Humanitarian Aid and Law Enforcement.
- Operative entities in these fields.

How can this contribution be done?

- Participating in Forums and Workshops (next workshop in Madrid at the end of 2006)
- Collaborating in new technology trials and demonstrations
- Suggesting possible applications that can make your operations easy.
- Suggesting improvements in existing applications.
- Information us about how your operations are carried out
- Collaborating in the review of the documentation generated in the project

What benefits does my organization obtain if contributing in HARMLESS?

- Your organization necessities will reach the European managers involved in the definition of satellite navigation strategies and regulation about its use.
- The new generation of applications will be well suited to your needs.
- You will be first-hand informed about the technologies improvements in your application area.

For participating or being informed, please fill the questionnaire in www.galileo-harmless.eu and you will participate in the raffle of a Tom Tom satellite navigator.
